ANNOTATED BIBLIOGRAPHY · EVIDENCE MAP

AI governance literature reviews

A bounded, comprehensive bibliography of review articles published in the twelve months ending 10 October 2026.

Coverage

21 review articles and review-led papers
10 October 2025 to 10 October 2026

What each entry adds

Method · key findings · contribution · limits · direct source

BOUNDARIES BEFORE BREADTH

What “all” means here

This bibliography aims for comprehensive coverage of publicly discoverable, review-based scholarship whose central subject is the governance, regulation, oversight, or responsible organizational use of AI.

Included

- Publication or formal acceptance within **10 October 2025 to 10 October 2026**.
- Systematic, scoping, structured, bibliometric-systematic, integrative, or clearly labeled literature reviews.
- Field-wide studies and sector reviews where governance is a primary analytic theme.
- Journal articles, conference papers, and preprints; status is labeled.

Excluded

- Empirical studies with only a background review.
- Commentaries, standards, policy reports, and framework proposals without a literature-review component.
- AI ethics reviews with no material governance, policy, accountability, or institutional dimension.
- Items outside the twelve-month window.

Search and verification. Public web, publisher, index, and repository records were searched through 10 October 2026. Full texts were checked where accessible. Two entries are explicitly marked abstract/index-level; their annotations are intentionally narrower.

Limit: No public search can prove absolute exhaustiveness, especially for newly posted, poorly indexed, non-English, paywalled, or later back-dated articles. Treat this as a high-coverage evidence map with transparent boundaries, not a claim that every database record worldwide has been captured.

NAVIGATION

Eight evidence clusters

01	**Field-wide maps and implementation** 2 entries	Entries 1-2
02	**Responsible, human-centered, and sustainable governance** 4 entries	Entries 3-6
03	**Organizational and workforce governance** 2 entries	Entries 7-8
04	**Health and critical sectors** 2 entries	Entries 9-10
05	**Education and knowledge institutions** 4 entries	Entries 11-14
06	**Government, cities, and public oversight** 3 entries	Entries 15-17
07	**Finance, cybersecurity, and legal-policy responses** 3 entries	Entries 18-20
08	**Energy and developing-economy governance** 1 entries	Entries 21-21

Reading cue. “Full text checked” means the annotation was grounded in the accessible article. “Publisher/repository record checked” means bibliographic and abstract-level information was verified, but detailed appraisal should return to the source.

EVIDENCE CLUSTER

Field-wide maps and implementation

01. Mapping global publication trends studies on artificial intelligence: A systematic literature review

April 2026

Full text checked

Nisa, A. A., & Salahudin. (2026). Mapping global publication trends studies on artificial intelligence: A systematic literature review. International Journal of Multidisciplinary Sciences and Arts, 5(2). https://doi.org/10.47709/ijmdsa.v5i2.7708

Design Systematic review + bibliometric mapping. PRISMA-oriented review of 2,815 Scopus records (2019-2025), analyzed with VOSviewer and CiteSpace.

Findings Maps five research clusters and identifies policy and regulation as a dominant strand in the recent AI literature. It is useful for locating governance inside the wider AI publication landscape rather than for evaluating particular rules.

Use / limits Best for field orientation and search-term design. The single-database corpus and broad AI scope limit coverage of grey literature and non-indexed policy work.

Open source or publisher record

02. Implementing AI governance: Contrasting the academic and grey literature

June 2026

Full text checked

Khan, A., Minkkinen, M., Jylha, V., Birkstedt, T., & Mantymaki, M. (2026). Implementing AI governance: Contrasting the academic and grey literature. ECIS 2026 Proceedings.

Design Systematic literature review. Comparative synthesis of 48 academic studies and 27 grey-literature documents about governing AI data, algorithms, and models.

Findings Academic work emphasizes principles and pre-deployment choices; practitioner material emphasizes policies, controls, and post-deployment monitoring. Read together, the two corpora describe a more complete governance lifecycle than either does alone.

Use / limits Particularly valuable for designing operational programs. It also shows why scholarship-only reviews may miss implementable controls and why vendor or policy guidance needs independent scrutiny.

Open source or publisher record

EVIDENCE CLUSTER

Responsible, human-centered, and sustainable governance

03. A systematic literature review of responsible AI governance frameworks and their implementation mechanisms for ethical business outcomes

31 July 2026

Full text checked - preprint

Alkhaldi, A., & Alkhaldi, F. (2026). A systematic literature review of responsible AI governance frameworks and their implementation mechanisms for ethical business outcomes. Research Square. https://doi.org/10.21203/rs.3.rs-10370338/v1

Design Systematic literature review. PRISMA review of 97 publications from 2014-2026, organized around framework principles and implementation mechanisms.

Findings Finds broad convergence on accountability, transparency, fairness, and stakeholder engagement, but persistent gaps in resources, technical feasibility, organizational culture, and translation from frameworks into routine practice.

Use / limits Useful for comparing governance mechanisms across business settings. As a preprint, its synthesis should be treated as provisional pending peer review.

Open source or publisher record

04. Rethinking the future: Developing a human-centered sustainable artificial intelligence governance framework

4 August 2026 (accepted)

Full text checked

Imamoglu, S. Z. (2026). Rethinking the future: Developing a human-centered sustainable artificial intelligence governance framework. Journal of Perspectives in Management, 10, e270566. https://doi.org/10.51359/2594-8040.2026.270566

Design Systematic literature review. PRISMA 2020 review of 43 Web of Science Core Collection studies published from 2020 onward, followed by thematic synthesis.

Findings Consolidates seven descriptive themes into a human-centered, sustainable governance architecture. The paper links social legitimacy and environmental responsibility to governance rather than treating them as downstream impacts.

Use / limits Useful as an integrative conceptual lens. The small, Web of Science-only corpus narrows disciplinary and regional representation.

Open source or publisher record

EVIDENCE CLUSTER

Responsible, human-centered, and sustainable governance

05. Artificial intelligence governance and sustainable industrial transformation in the era of Industry 5.0

2 September 2026

Full text checked

Mhlanga, D. (2026). Artificial intelligence governance and sustainable industrial transformation in the era of Industry 5.0. Sustainability, 18, 8992. https://doi.org/10.3390/su18178992

Design Integrative literature review. Conceptual and integrative review structured around six themes and a proposed Human-Centric AI Governance Framework.

Findings Connects AI governance with worker inclusion, resilience, sustainability, and the human-centered agenda of Industry 5.0. It broadens governance beyond compliance but offers less reproducible evidence selection than a systematic review.

Use / limits Best for strategy and agenda setting, not effect estimation. Readers should distinguish the author-developed framework from empirically validated practice.

Open source or publisher record

06. Developing a Green AI governance framework for sustainable digital business transformation

28 August 2026

Full text checked

Syahyono, Fahrudin, Anita, & Ani. (2026). Developing a Green AI governance framework for sustainable digital business transformation. ADI Journal on Recent Innovation, 8(1), 26-37. https://doi.org/10.34306/ajri.v8i1.1581

Design Systematic literature review. Review of 2020-2025 literature synthesized into four dimensions: sustainability, ethics and regulation, operational efficiency, and stakeholder accountability.

Findings Proposes links among the AI lifecycle, governance mechanisms, sustainability metrics, and business-transformation outcomes, with explicit attention to SDGs 9, 12, and 13.

Use / limits A compact bridge between environmental and governance literatures. The review provides a framework for testing; it does not by itself establish which controls reduce environmental impact.

Open source or publisher record

EVIDENCE CLUSTER

Organizational and workforce governance

07. AI governance and employee well-being in digital workplaces: A systematic literature review

25 July 2026

Full text checked

Yulianto, H., & Saryono. (2026). AI governance and employee well-being in digital workplaces: A systematic literature review. Digital Theory, Culture & Society, 4(1), 193-210. https://doi.org/10.61126/dtcs.v4i1.152

Design Systematic literature review. PRISMA review of 44 studies from six databases covering 2015-2026.

Findings Organizes evidence into six themes spanning performance gains, technostress, burnout, AI anxiety, participation, and safeguards. It proposes a four-layer, human-centered governance framework for digital workplaces.

Use / limits Useful for adding employee outcomes to governance scorecards. Heterogeneous workplace studies and limited causal evidence constrain claims about intervention effectiveness.

Open source or publisher record

08. Artificial intelligence, corporate information governance, and Environmental, Social, and Governance (ESG): A systematic performance review

28 March 2026

Full text checked

Panda, S. (2026). Artificial intelligence, corporate information governance, and Environmental, Social, and Governance (ESG): A systematic performance review. International Journal of Applied Resilience and Sustainability, 2(2), 842-868. https://doi.org/10.70593/deepsci.0202035

Design Systematic review. PRISMA 2020 review of four databases, covering 2019-2025 and reporting 64 included studies from 1,895 initial records.

Findings Synthesizes work on explainable AI, RegTech, sustainable-finance analytics, AI risk management, stakeholder governance, and ESG reporting. It frames information governance as the connective tissue between AI adoption and accountable sustainability claims.

Use / limits Helpful for corporate governance and disclosure questions. The broad construct mix makes it harder to separate evidence about actual ESG performance from reporting and conceptual proposals.

Open source or publisher record

EVIDENCE CLUSTER

Health and critical sectors

09. Governance for safe and responsible AI in healthcare organisations: A scoping review of frameworks

1 May 2026

Full text checked

Wang, H., Freeman, C., & Magrabi, F. (2026). Governance for safe and responsible AI in healthcare organisations: A scoping review of frameworks. npj Digital Medicine.

Design Scoping review. PRISMA-ScR search of MEDLINE, Embase, and Scopus that identified 77 organizational governance frameworks.

Findings Codes frameworks against principles, assessment methods, lifecycle stages, and oversight. Only 10 of 77 include all four components, and oversight is the least common, exposing a persistent implementation gap.

Use / limits One of the strongest sector-specific maps for healthcare organizations. It describes framework content and completeness, not whether adoption improves safety.

Open source or publisher record

10. The challenges of balancing AI compliance and technological innovations in critical sectors: A systematic literature review

9 May 2026

Abstract and repository record checked

Enkhtaivan, B., & Uwaoma, C. (2026). The challenges of balancing AI compliance and technological innovations in critical sectors: A systematic literature review. arXiv:2606.12423.

Design Systematic literature review - preprint. Review of 2020-2025 literature across healthcare, finance, energy, and defense.

Findings Highlights fragmented regulation, disproportionate compliance burdens for smaller organizations, and governance models that lag sector realities. It identifies risk-tiered regulation, compliance by design, and explainability as recurring responses.

Use / limits Useful for cross-sector comparison and problem framing. Preprint status and cross-sector aggregation mean recommendations need validation in each regulated domain.

Open source or publisher record

EVIDENCE CLUSTER

Education and knowledge institutions

11. Strategic leadership for ethical AI integration in higher education: A systematic review of challenges and opportunities

5 August 2026

Full text checked

Obied, A. J., & Haj Ali, W. (2026). Strategic leadership for ethical AI integration in higher education: A systematic review of challenges and opportunities. Frontiers in Education, 11, 1906579. https://doi.org/10.3389/feduc.2026.1906579

Design Systematic review. PRISMA 2020 review of 50 studies published from 2021-2025.

Findings Synthesizes leadership challenges and opportunities into a five-phase cycle: vision, capacity building, governance in action, evaluation, and iterative refinement. Ethical integration is treated as an organizational capability rather than a one-off policy.

Use / limits Useful for university leaders building a staged program. The framework is synthesized from literature and still needs comparative implementation evidence.

Open source or publisher record

12. Institutional approaches to generative AI management in higher education: A systematic review

2026

Full text checked

Bacalso, F. D., Villamor, F. E., Paclipan, C. P., Orquia, C. J. B., Rendon, I. P., Albiso, A. T., & Himang, C. M. (2026). Institutional approaches to generative AI management in higher education: A systematic review. Frontiers in Education, 11, 1814426. https://doi.org/10.3389/feduc.2026.1814426

Design Systematic review. PRISMA 2020 review using seven databases; 239 records were screened and 50 studies included.

Findings Finds emerging multi-unit oversight, integrity and disclosure standards, and risk-based data governance, alongside misconduct, privacy, bias, access, and Global South capacity concerns.

Use / limits A useful map of institutional policy responses to generative AI. The field is moving quickly, so included policies may become outdated faster than the research cycle.

Open source or publisher record

EVIDENCE CLUSTER

Education and knowledge institutions

13. Artificial intelligence in school leadership: A structured literature review of organisational benefits and ethical challenges

3 April 2026

Publisher record checked

Lipsou, E., Keravnos, N., & Eteokleous, N. (2026). Artificial intelligence in school leadership: A structured literature review of organisational benefits and ethical challenges. Artificial Intelligence in Education, 2(3), 85-100.

Design Structured literature review. PRISMA-aligned review of 50 studies (2019-2025) from Scopus, Web of Science, ERIC, and Google Scholar.

Findings Balances administrative efficiency, decision support, and resource allocation against bias, opacity, privacy, and diffuse accountability. The resulting guide positions school leaders as governance actors.

Use / limits Useful for K-12 leadership and policy design. Publisher-record verification supports the high-level annotation, but detailed appraisal should use the full article.

Open source or publisher record

14. Artificial intelligence for university management and governance in higher education: A systematic review

25 March 2026

Repository record checked

Ongcachuy, B. L., & Potane, J. D. (2026). Artificial intelligence for university management and governance in higher education: A systematic review. Zenodo, version 1.

Design Systematic review. PRISMA 2020 review of ERIC records from 2022-2025; 3,669 records were narrowed to 10 included studies.

Findings Finds a repeated tension between efficiency and risks involving privacy, bias, and surveillance, with widespread stakeholder-readiness concerns.

Use / limits A focused starting point for university administration. The very small included set and single-domain search make the conclusions sensitive to selection choices.

Open source or publisher record

EVIDENCE CLUSTER

Government, cities, and public oversight

15. Artificial intelligence in sustainable governance of smart cities: A review of data and algorithmic governance challenges

12 June 2026

Full text checked

Wang, C., Wang, Y., & Sun, Y. (2026). Artificial intelligence in sustainable governance of smart cities: A review of data and algorithmic governance challenges. Buildings, 16(12), 2363.

Design Systematic review + bibliometric mapping. PRISMA-guided review of 82 studies (2020-2025) from 876 records, combined with VOSviewer and CiteSpace mapping.

Findings Argues that data and algorithmic governance operate as a coupled system in smart cities. Its double-helix model links technical foundations, sustainability, the built environment, and accountability rather than treating these as separate streams.

Use / limits Useful for urban-governance architecture and research mapping. Bibliometric relationships indicate attention and association, not policy effectiveness.

Open source or publisher record

16. Generative artificial intelligence and the risk of administrative opacity in municipal governments: A literature review

15 April 2026

Abstract and index record checked

Mendoza-Rejas, K., Mendoza-Rejas, U., & Vasquez-Hernandez, R. (2026). Generative artificial intelligence and the risk of administrative opacity in municipal governments: A literature review. Revista Espacios, 47(2), 296-308. https://doi.org/10.48082/espacios-a26v47n02r08

Design Systematic literature review. Systematic review of SciELO and Dialnet; 313 records were screened and 35 included.

Findings Reviews efficiency gains from generative AI alongside traceability, transparency, and oversight risks in municipal administration, with attention to Latin American institutional constraints.

Use / limits Useful for local-government risk framing and regional context. The annotation is based on the abstract and index record rather than independent full-text appraisal.

Open source or publisher record

EVIDENCE CLUSTER

Government, cities, and public oversight / Finance, cybersecurity, and legal-policy responses

17. Artificial intelligence in government oversight: Advances, challenges, and ethical perspectives from a systematic review

2 December 2025 (accepted)

Full text checked

Santini Rodriguez, F. J. (2026). Artificial intelligence in government oversight: Advances, challenges, and ethical perspectives from a systematic review. Revista Invecom.

Design Systematic qualitative review. PRISMA 2020 review of five databases, covering 2015-2025; 42 studies met CASP-based quality criteria.

Findings Groups evidence into automation and digital transformation, ethical-regulatory impacts, and institutional capacity. Benefits in audit speed and detection are repeatedly conditioned on infrastructure, training, transparency, and accountability.

Use / limits Useful for public audit and oversight organizations, especially in Latin American contexts. The accepted date falls inside the window; the PDF does not state a clear online-publication date.

Open source or publisher record

18. Regulatory frameworks for AI in financial cybersecurity and mobile banking: Evidence from a systematic review

4 June 2026

Abstract and index record checked

Mazuelos-Soldevilla, R., et al. (2026). Regulatory frameworks for AI in financial cybersecurity and mobile banking: Evidence from a systematic review. Aula Virtual, 7(14), e732. https://doi.org/10.5281/zenodo.20411727

Design Systematic review. Systematic review organizing evidence across cybersecurity standards, data protection, financial compliance, and algorithmic governance.

Findings Finds that mobile-banking risks are only partly covered by the intersection of existing regulatory frameworks. The paper is most useful as a map of overlapping regimes and uncovered interfaces.

Use / limits Useful for compliance-gap analysis in financial services. This annotation is abstract-level; the full methods and included-study list were not independently checked.

Open source or publisher record

EVIDENCE CLUSTER

Finance, cybersecurity, and legal-policy responses

19. Gender bias in AI systems: A critical analysis of regulatory frameworks and policy responses

2026

Full text checked

Ayata, G. (2026). Gender bias in AI systems: A critical analysis of regulatory frameworks and policy responses. Bialostockie Studia Prawnicze, 31(1). https://doi.org/10.15290/bsp.2026.31.01.08

Design Systematic review + policy analysis. Critical legal-policy analysis incorporating a systematic review of research on how gender bias enters and persists in AI systems.

Findings Compares UNESCO, EU AI Act, and Council of Europe approaches and identifies a gap between formal commitments and implementation. The governance contribution is its focus on equality safeguards and enforcement, not a general AI-governance taxonomy.

Use / limits Useful for rights-based regulation and bias governance. Its topical focus is narrower than the field-wide reviews and should complement, not substitute for, general governance frameworks.

Open source or publisher record

20. Responsible AI - A literature review

April 2026

Full text checked

Akanksha. (2026). Responsible AI - A literature review. Indian Journal of Research in Law and Management, 3(7).

Design Narrative literature review. Narrative review organized into five themes, including principles, regulation, governance, implementation, and emerging policy direction through April 2026.

Findings Describes convergence around responsible-AI principles alongside fragmented and thin enforcement. It contrasts stronger European enforcement pressure with a more deregulatory United States trajectory.

Use / limits Useful as a current legal-policy overview. Because search, screening, and appraisal procedures are less explicit than in systematic reviews, it carries greater selection-risk.

Open source or publisher record

EVIDENCE CLUSTER

Energy and developing-economy governance

21. Governing artificial intelligence in the energy sector of resource-rich developing economies: A review of legal, institutional, and policy designs in Ghana

2026

Full text checked

Borsor, S. A. (2026). Governing artificial intelligence in the energy sector of resource-rich developing economies: A review of legal, institutional, and policy designs in Ghana. Journal of Energy and Natural Resource Management, 12(1), 1-11.

Design	Qualitative review + doctrinal analysis. Combines systematic literature review, doctrinal legal analysis, and thematic synthesis into a six-step governance framework.
Findings	Examines sector governance through Ghana, emphasizing institutional design, extractive power relationships, and digital-colonialism risks. It adds geographic and political-economy dimensions often missing from universal frameworks.
Use / limits	Useful for energy policy and context-sensitive governance in developing economies. A single-country legal-institutional focus limits direct transfer without local adaptation.

Open source or publisher record

FROM PRINCIPLES TO PRACTICE

Five persistent governance gaps

Gap	Signal across the review literature	Implication
Implementation	Principles recur across sectors, but mechanisms, owners, evidence, and post-deployment routines are less consistently specified.	Evaluate programs by operational controls and assurance evidence, not principle lists alone.
Oversight	Monitoring, escalation, independent challenge, and governance after deployment are repeatedly thinner than design-stage guidance.	Build lifecycle governance with named decision rights and review triggers.
Capacity	Skills, infrastructure, resources, leadership, and organizational culture condition adoption in workplaces, universities, government, and regulated sectors.	Treat governance as an institutional capability with staffing and budget.
Context	Sector, geography, political economy, and organizational scale shape both risk and feasible controls.	Avoid copying universal frameworks without local legal and institutional adaptation.
Evidence	Many reviews map frameworks and themes; few can show that a governance intervention improves outcomes.	Prioritize comparative evaluation, audits, longitudinal studies, and transparent outcome measures.

Bottom line. The 2025-2026 review literature is less divided over which values matter than over how to institutionalize, test, and sustain them. The practical frontier is evidence-backed implementation.

DECISION SUPPORT

A quick reading path

01

Start broad

Use Nisa & Salahudin for publication structure and Khan et al. for the academic-practitioner implementation divide.

02

Select a mechanism lens

Use Alkhaldi & Alkhaldi for responsible-AI mechanisms, Imamoglu for human-centered sustainability, and Syahyono et al. for Green AI.

03

Move to sector fit

Use Wang et al. for healthcare, the higher-education reviews for institutional governance, and the public-sector group for traceability and capacity.

04

Check evidence strength

Distinguish PRISMA-style searches from integrative or narrative reviews, and framework completeness from demonstrated effectiveness.

> **Recommended extraction fields for follow-on work:** governance level, lifecycle stage, named owner, legal basis, control mechanism, assurance method, stakeholder participation, outcome metric, geography, and implementation evidence.

Methodological caution

Large record counts do not guarantee a better answer: narrow sector questions may be served by small, transparent corpora. Conversely, bibliometric prominence is not evidence that a mechanism works. Use each review for the claim its design can support.

COVERAGE AUDIT

What is not in the count

Near-miss outside the strict twelve-month window

Batool, A., Zowghi, D., & Bano, M. (2025). AI governance: A systematic literature review. AI and Ethics, 5, 3265-3279. Published online 14 January 2025. https://doi.org/10.1007/s43681-024-00653-w.

This influential field-wide systematic review predates the 10 October 2025 cutoff and is therefore excluded from the 21-record total. It is still valuable background: its “who, what, when, and how” framing and five governance levels help explain the baseline that newer implementation-focused reviews extend.

Open accessible copy

> **Access-status note.** Records 13 and 14 were verified from publisher or repository pages. Records 16 and 18 were annotated from abstracts/index records. All others were checked against accessible full text or, for the arXiv preprint, the repository abstract and record.

Interpreting publication dates

Where a clear online date was available, it is shown. For Santini Rodriguez, formal acceptance on 2 December 2025 places the work inside the window, but the PDF did not show an unambiguous online-publication date. Entries labeled simply “2026” were located in 2026 volumes or records without a more precise verified date.

Recommended update cycle

Because several 2026 papers were newly posted and indexing lags publication, refresh this search quarterly. Recheck preprints for peer-reviewed versions and replace abstract-level annotations when full texts become available.
