MORAL FOUNDATIONS THEORY AND AI BENCHMARKING

Annotated Bibliography

A source-by-source guide to the 51 references behind *The Architecture of Artificial Morality*, with relevance, evidence quality, and practical cautions for benchmark design.

51	17	6
SOURCES ANNOTATED	TIER A SOURCES	EVIDENCE THEMES

Scope. Citation titles, destinations, and numbering follow the works-cited list in the user-provided Gemini research report. Where that report omitted authors, dates, or full titles, this bibliography does not invent them. Grades evaluate source type and evidentiary use, not the correctness of every result.

The evidence is strongest when theory, measurement, and behavior agree

Core judgment. The report's central premise is productive: MFT gives AI evaluators a plural, testable vocabulary. Its central risk is equally important: a moral profile can be an artifact of the instrument, corpus, language, prompt, or model version.

Evidence grades

- **A** — **Strong anchor.** Peer-reviewed journal or archival conference work with direct relevance.
- **B** — **Promising, provisional.** Preprint, working paper, review copy, or repository copy of scholarship.
- **C** — **Useful context.** Official hub, research report, access page, or applied guide.
- **D** — **Discovery only.** Tertiary page, detached figure/table, course upload, or search portal.

What an annotation tells you

- **Contribution:** why the source appears in the report.
- **Best use:** the decision or benchmark stage it can inform.
- **Caution:** what not to infer from it.

A defensible benchmark stack

- Define the moral construct and alternative taxonomies.
- Select and document the exact instrument version.
- Use more than one corpus, method, and language.
- Record model, prompt, temperature, date, and sampling.
- Report uncertainty and profile robustness.
- Separate human similarity from normative adequacy.

Three claims that need the most caution

Classifier superiority: accuracy depends on label prevalence, corpus, and annotator agreement.

RLHF homogenization: provider and version comparisons need matched prompts and longitudinal evidence.

Causal value steering: representational separability does not guarantee safe, selective control.

Foundations and interpretation

1

Understanding Jonathan Haidt

C

Authorea · Scholarly profile / working paper

Provides intellectual and biographical context for Haidt's role in the intuitionist turn that precedes Moral Foundations Theory (MFT). It is useful for orientation and historical framing, but it is not the primary theoretical statement or a validation study; use it to understand provenance, not to support psychometric or model-performance claims.

FOUNDATIONS AND INTERPRETATION

2

Moral Foundations Theory: An Overview and Critical Analysis

D

Studocu · Course-hosted secondary material

Offers an accessible summary and critique of MFT. Because the report links to a student-document platform rather than a stable scholarly publication, the item is best treated as a lead to concepts and objections, not as authoritative evidence. Replace it with the underlying peer-reviewed sources when making formal claims.

FOUNDATIONS AND INTERPRETATION

3

Moral Foundations Test

C

Moral Foundations project site · Public test / demonstration

Shows how foundation scores can be presented to a general audience and helps readers grasp the idea of a multidimensional moral profile. A public-facing test is not a substitute for a validated research instrument, documented sampling, or reproducible scoring. Use it for demonstration rather than benchmark construction.

FOUNDATIONS AND INTERPRETATION

4

Moral Foundations Theory

C

MoralFoundations.org · Official theory hub

Serves as the report's central orientation point for definitions, theory history, and links to instruments and publications. It is an appropriate first stop for terminology and project resources, but its claims should be paired with the peer-reviewed articles and measurement studies collected elsewhere in this bibliography.

FOUNDATIONS AND INTERPRETATION

Foundations and interpretation / LLM moral profiling

5

How Moral Foundations Theory Succeeded in Building on Sand: A Response to Suhler and Churchland

B

ResearchGate copy · Theoretical response / repository copy

Defends the theory against criticism of its modular and evolutionary assumptions. The item matters because it exposes the theory's contested foundations instead of treating MFT as settled fact. ResearchGate is only the access point; for formal citation, readers should trace the original publication and version of record.

FOUNDATIONS AND INTERPRETATION

6

Moral foundations theory

D

Wikipedia · Tertiary overview

Provides a quick map of the theory, its foundations, and common debates. It is useful for vocabulary and discovering references, but its editable, tertiary nature makes it unsuitable as evidence for benchmark validity, ideological differences, or evolutionary claims. Follow its citations to primary literature.

FOUNDATIONS AND INTERPRETATION

7

Framing Your Message Effectively with the Moral Foundations Theory

C

University of Chicago Harris Writing Workshop · Applied educational guide

Translates MFT into practical message-framing guidance and illustrates why foundation-sensitive language can matter outside psychology. It supports the report's discussion of moral reframing, but it is an instructional article rather than an experiment. Use it for examples, not causal estimates about persuasion.

FOUNDATIONS AND INTERPRETATION

8

Are Large Language Models Moral Hypocrites? A Study Based on Moral Foundations

B

arXiv · Preprint / empirical study

Compares abstract Moral Foundations Questionnaire responses with judgments on concrete vignettes, framing divergence as moral hypocrisy. It is central to the report's warning that one instrument can produce a misleadingly coherent profile. The study is valuable for design logic, but its model set, versions, prompts, and preprint status constrain generalization.

LLM MORAL PROFILING

Corpora and computational measurement / LLM moral profiling / Measurement and psychometrics

9

The Moral Foundations Reddit Corpus

B

arXiv · Dataset paper / preprint

Introduces a hand-annotated Reddit corpus covering revised MFT categories and multiple discourse communities. It gives benchmark designers longer-form, context-rich text beyond Twitter and reports annotator metadata. Reddit sampling, subreddit culture, English-language concentration, and subjective labels remain important limits on external validity.

CORPORA AND COMPUTATIONAL MEASUREMENT

10

A Multilingual Benchmark Dataset for Evaluating the Moral ...

B

arXiv · Dataset paper / preprint

Extends moral evaluation across languages, addressing a major weakness of English-only alignment tests. Its relevance is high for cross-cultural benchmarking, especially when a model's verdict may shift with language. The source report truncates the title, so readers should consult the linked paper for full bibliographic metadata and examine language coverage and annotation protocol.

CORPORA AND COMPUTATIONAL MEASUREMENT

11

Differences in the Moral Foundations of Large Language Models

B

arXiv · Preprint / comparative experiment

Profiles a broad set of models against a human moral-vignette baseline and reports provider- and capability-linked differences. It directly supports comparative model auditing, while also illustrating why model version, sampling, and instrument choice must be recorded. As a preprint, its estimates should be replicated before they become deployment thresholds.

LLM MORAL PROFILING

12

The Moral Foundations Questionnaire-1 Short-Form Judgment

A

Collabra: Psychology · Peer-reviewed measurement study

Examines a short-form version of the original questionnaire and is directly relevant to the trade-off between respondent burden and measurement quality. Benchmark designers should use it to justify item selection rather than shortening an instrument ad hoc. Any model comparison must preserve the exact wording, scale, and scoring procedure used.

MEASUREMENT AND PSYCHOMETRICS

Measurement and psychometrics / Foundations and interpretation / LLM moral profiling

13

Moral Foundations Questionnaire 2 (MFQ-2)

C

Psytests.org · Instrument access page

Provides convenient access to the revised instrument that separates equality from proportionality. It helps operationalize the report’s discussion of MFQ-2, but an access page is not the validation record. Pair it with the instrument’s peer-reviewed development paper and preserve translation and scoring documentation.

MEASUREMENT AND PSYCHOMETRICS

14

Moral Foundations Questionnaire and Moral ...

A

PubMed Central · Peer-reviewed article / archive copy

Supplies an accessible scholarly treatment of the questionnaire and its measurement properties. This is one of the stronger sources for deciding whether MFT dimensions are empirically separable and comparable. Benchmark users should inspect sample composition, factor structure, and invariance results before adopting scores across cultures or languages.

MEASUREMENT AND PSYCHOMETRICS

15

Publications

C

MoralFoundations.org · Official bibliography hub

Collects the theory’s core publications and is useful for replacing tertiary links with primary scholarship. It is a discovery aid rather than a single evidentiary source. Readers should cite the individual papers that support a claim and check whether later psychometric work revises the original formulation.

FOUNDATIONS AND INTERPRETATION

16

The Staircase of Ethics: Probing LLM Value Priorities through Multi-...

A

EMNLP 2025 / ACL Anthology · Peer-reviewed conference paper

Offers a structured way to probe how models prioritize values across levels or conflicts rather than merely detecting moral language. It is useful for moving from static labels to comparative value ordering. Readers should review the task construction and stability tests before interpreting the resulting hierarchy as a durable model trait.

LLM MORAL PROFILING

Alternative moral frameworks / LLM moral profiling / Pluralistic and agentic alignment

17

Moral disciplining: The cognitive and evolutionary foundations of puritanical morality

A

Behavioral and Brain Sciences · Peer-reviewed target article

Develops an evolutionary account of puritanical or disciplining moral concerns, enriching the report's treatment of purity, authority, and norm enforcement. It is valuable as a theoretical counterweight to a simple six-score profile. Benchmark designers can use it to ask whether MFT categories hide distinct motives or social functions.

ALTERNATIVE MORAL FRAMEWORKS

18

How Stakeholder Framing Shapes Moral Judgment in Humans and AI

B

Preprints.org · Preprint / comparative study

Tests whether who is described, and how, changes moral evaluation in humans and models. It supports the report's concern that moral scores are not context-free dispositions. Because it is a preprint, the framing manipulations, sample, and model settings need scrutiny before its effects are treated as benchmark constants.

LLM MORAL PROFILING

19

The Extended Morality as Cooperation Dictionary (eMACD)

A

Taylor & Francis Online · Peer-reviewed methods article

Operationalizes Morality-as-Cooperation as an alternative to MFT lexicons. It is especially useful for checking whether a model appears moral only because the evaluator selected one taxonomy. Comparative benchmarking across MFT and cooperation-based categories can reveal framework dependence rather than true behavioral stability.

ALTERNATIVE MORAL FRAMEWORKS

20

Multi-level Value Alignment in Agentic AI Systems

B

arXiv · Preprint / conceptual framework

Frames value alignment across multiple levels in agentic systems, where individual outputs, plans, interactions, and institutional constraints may diverge. It broadens the report beyond one-shot questionnaires. Its usefulness is architectural and conceptual; operational metrics and empirical validation should be checked before adoption.

PLURALISTIC AND AGENTIC ALIGNMENT

Corpora and computational measurement / LLM moral profiling / Foundations and interpretation

21

MOKA: Moral Knowledge Augmentation for Moral Event Extraction

B

arXiv · Preprint / dataset and model paper

Introduces structured moral-event extraction from news, combining participants, events, context, and moral labels. It addresses a key weakness of word-count approaches: moral meaning may be implicit in relations and background knowledge. News-domain sampling and annotation choices still limit transfer to dialogue, policy advice, or agent behavior.

CORPORA AND COMPUTATIONAL MEASUREMENT

22

AI language model rivals expert ethicist in perceived moral expertise

A

PubMed Central · Peer-reviewed empirical article / archive copy

Examines how people perceive AI-generated moral guidance relative to expert ethical advice. It is relevant to deployment risk because perceived expertise can affect reliance even when underlying reasoning quality is uncertain. The study should not be read as proof that a model is an ethicist; perception, correctness, and alignment are distinct outcomes.

LLM MORAL PROFILING

23

The rise of moral cognition

B

ResearchGate copy · Scholarly review / repository copy

Situates MFT within the broader emergence of moral cognition research. It helps prevent the report from treating one taxonomy as the entire field and offers conceptual context for intuition, reasoning, emotion, and culture. ResearchGate is the access layer; cite the original publication when possible.

FOUNDATIONS AND INTERPRETATION

24

Moral Foundations Theory (Japanese-language overview)

D

Wikipedia (Japanese) · Tertiary overview

Provides Japanese-language orientation to the theory and may help identify translated terminology. It does not establish cross-cultural validity or provide a validated Japanese instrument. Use it only as a navigation aid, then consult primary translation and measurement-invariance studies.

FOUNDATIONS AND INTERPRETATION

Measurement and psychometrics / Corpora and computational measurement / LLM moral profiling

25

Moral Foundation Measurements Fail to Converge on Multilingual Party Manifestos

A

Political Analysis · Peer-reviewed measurement study

Shows that different moral-foundation measurement approaches can disagree on multilingual political text. This is a crucial caution for AI benchmarking: labels from one lexicon or model may not represent a stable construct. Convergent validity should be tested across methods, languages, and domains before reporting a single moral profile.

MEASUREMENT AND PSYCHOMETRICS

26

How reliable are dictionary-based methods for examining morality in ...

A

NLP4DH 2025 / ACL Anthology · Peer-reviewed conference paper

Evaluates the reliability of dictionary-based moral-language analysis. It directly informs the report's contrast between early Moral Foundations Dictionaries and contextual classifiers. The paper is useful for deciding when interpretability and speed justify lexicons, and when context loss and domain drift make them inadequate.

CORPORA AND COMPUTATIONAL MEASUREMENT

27

Box-swarm plots of word scores across Moral Foundations Dictionaries

D

ResearchGate figure · Figure / secondary access

Visualizes score distributions across moral dictionaries and can quickly reveal differences among lexical resources. A detached figure cannot carry the methods, data provenance, or uncertainty needed for interpretation. Use it as an illustration only after consulting the parent article.

CORPORA AND COMPUTATIONAL MEASUREMENT

28

Mapping Moral Reasoning in LLMs: A Multi-Dimensional Analysis of ...

A

AAAI/ACM AIES proceedings · Peer-reviewed conference paper

Treats moral reasoning as multidimensional rather than a single safety score. It supports richer comparisons across foundations, tasks, or reasoning behaviors and is well aligned with the report's benchmarking goal. Review whether dimensions are theoretically independent and whether repeated prompting demonstrates stable behavior.

LLM MORAL PROFILING

Corpora and computational measurement / LLM moral profiling

29

MFTCXplain: A Multilingual Benchmark Dataset for Evaluating the ...

A

Findings of EMNLP 2025 / ACL Anthology · Peer-reviewed dataset paper

Adds multilingual, explanation-oriented data for evaluating moral framing and model rationales. It is valuable because a label alone does not show whether a model's explanation uses the intended foundation. Benchmark users should distinguish explanation plausibility from causal faithfulness and inspect coverage across languages and moral categories.

CORPORA AND COMPUTATIONAL MEASUREMENT

30

A Dual-Path Architecture for Moral Foundation Prediction

B

Authorea · Working paper

Proposes a two-path approach to moral-foundation prediction, likely combining complementary signals or reasoning routes. It is relevant to the report's search for more context-sensitive classifiers. As a working paper, architecture gains should be checked against strong baselines, ablations, and out-of-domain tests.

CORPORA AND COMPUTATIONAL MEASUREMENT

31

Fairness Metric Design Exploration in Multi-Domain Moral Sentiment

B

arXiv · Preprint / methods study

Explores how fairness metrics behave across domains in moral-sentiment systems. It matters because aggregate classifier accuracy can conceal unequal performance across groups, topics, or foundations. Use it to specify disaggregated evaluation, while treating proposed metrics as provisional until replicated and linked to concrete harms.

CORPORA AND COMPUTATIONAL MEASUREMENT

32

A Bayesian Evaluation of LLMs' Moral Values Understanding

A

UncertaiNLP 2025 / ACL Anthology · Peer-reviewed workshop paper

Uses a Bayesian framework to represent uncertainty in model moral-values evaluation. This is preferable to point estimates when outputs are stochastic or prompt-sensitive. The paper can guide interval reporting and hierarchical comparisons, but priors, sampling procedures, and repeated-query design materially affect the conclusions.

LLM MORAL PROFILING

Corpora and computational measurement / Alternative moral frameworks / Cross-lingual validity / Measurement and psychometrics

33

Interannotator Agreement (PABAK and Kappa) Scores for All Datasets and Foundations

D

ResearchGate table · Table / secondary access

Provides a compact view of agreement across datasets and foundation labels. It is useful for showing that moral annotation is unevenly difficult, but a table alone cannot explain prevalence effects, coder training, or adjudication. Read the parent study before using these coefficients to select a dataset.

CORPORA AND COMPUTATIONAL MEASUREMENT

34

Language-based game theory in the age of artificial intelligence

B

arXiv · Preprint / theoretical paper

Connects language models with strategic interaction and game-theoretic reasoning. It broadens moral benchmarking toward coordination, incentives, and cooperation, complementing foundation-based introspection. Its relevance is conceptual unless a benchmark ties the theory to observable interactive behavior.

ALTERNATIVE MORAL FRAMEWORKS

35

GPT is an effective tool for multilingual psychological text analysis

A

Proceedings of the National Academy of Sciences · Peer-reviewed empirical article

Evaluates GPT-based psychological text analysis across languages and supports cautious optimism about multilingual coding. It is important for method comparison, but effectiveness in general psychological analysis does not automatically validate moral-foundation inference. Benchmark designers should reproduce performance on their specific languages, constructs, and domains.

CROSS-LINGUAL VALIDITY

36

Perils and opportunities in using large language models in ...

A

PNAS Nexus · Peer-reviewed methods commentary/article

Surveys methodological benefits and risks of using LLMs in research workflows. It supports transparent reporting, human validation, and sensitivity analysis when models act as annotators or participants. The source report truncates the title, so readers should consult the linked version for scope and recommendations.

MEASUREMENT AND PSYCHOMETRICS

LLM moral profiling / Discovery resources

37

LLM ethics benchmark: a three-dimensional assessment system for ...

A

PubMed Central · Peer-reviewed benchmark article / archive copy

Proposes a three-dimensional ethics assessment rather than a single pass/fail metric. It can help triangulate MFT with other ethical capabilities and reduce overreliance on one taxonomy. Adoption should depend on construct definitions, item leakage checks, human baselines, and evidence that dimensions predict behavior outside the test.

LLM MORAL PROFILING

38

Language Model Moral Competence

C

MINT Lab / Seth Lazar · Research report

Frames what it could mean for a language model to display moral competence and likely distinguishes performance from genuine moral agency. It is a useful conceptual bridge between benchmark results and philosophical interpretation. As a lab report, it should complement, not replace, peer-reviewed empirical work.

LLM MORAL PROFILING

39

Daily Papers: moral evaluation

D

Hugging Face · Search / discovery page

Functions as a discovery feed for recent papers on moral evaluation. It is useful for horizon scanning but is not itself a source supporting any claim. Search results change over time, may be incomplete, and should be replaced in citations with the underlying paper and stable version.

DISCOVERY RESOURCES

40

Large-scale moral machine experiment on large language models

A

PubMed Central · Peer-reviewed empirical article / archive copy

Applies large-scale moral-dilemma testing to language models and provides behavioral evidence at a scale beyond a small vignette set. It is useful for comparison with human choice patterns, while its dilemmas represent only a subset of moral life. Scenario framing and forced-choice design can simplify genuine trade-offs.

LLM MORAL PROFILING

LLM moral profiling / Cross-lingual validity / Mechanistic and pluralistic control

41

How do LLMs reflect human moral foundations? A study ...

A

Taylor & Francis Online · Peer-reviewed empirical article

Directly evaluates how model outputs map onto human moral-foundation patterns. It is one of the most relevant sources for the report's core question, especially if it documents model versions, human comparators, and elicitation. Readers should still distinguish similarity to a sample from normative alignment or universal representativeness.

LLM MORAL PROFILING

42

A Diagnostic Framework for Cross-Lingual Moral Alignment in LLMs

B

arXiv · Preprint / diagnostic framework

Diagnoses whether moral judgments remain stable when story language and reasoning language change. It directly underpins the report's concern about multilingual moral fragility. Before deployment use, the framework needs broad language coverage, translation controls, repeated sampling, and separation of linguistic competence from value change.

CROSS-LINGUAL VALIDITY

43

Tracing Moral Foundations in Large Language Models

B

arXiv · Preprint / interpretability study

Investigates where or how moral-foundation information appears inside model representations. It supports the report's shift from behavior-only testing toward mechanistic analysis. Internal separability does not by itself prove causal control or stable values; concept probes should be tested for selectivity, robustness, and intervention effects.

MECHANISTIC AND PLURALISTIC CONTROL

44

Disentangling Values from Semantics with One-Way Mixing for Low-...

B

arXiv · Preprint / representation method

Targets the separation of value-related representation from semantic content, a prerequisite for controlled steering without changing factual meaning. It is highly relevant to the report's value-code versus semantic-code thesis. Because it is recent preprint work, leakage, generalization, and unintended capability effects require independent testing.

MECHANISTIC AND PLURALISTIC CONTROL

Mechanistic and pluralistic control / LLM moral profiling

45

Adaptive Multi-Value Control in LLMs via Causal Activation Steering

B

ResearchGate copy · Working paper / repository copy

Explores inference-time control over multiple value dimensions through causal activation interventions. It offers a technical route to steerable pluralism without full retraining. The crucial questions are whether steering is genuinely causal, whether dimensions interfere, and whether controls remain robust across tasks, layers, and adversarial prompts.

MECHANISTIC AND PLURALISTIC CONTROL

46

Counterfactual Reasoning for Steerable Pluralistic Value Alignment

B

arXiv · Preprint / alignment method

Uses counterfactual reasoning to support controllable responses across competing value perspectives. It fits the report's move away from a single universal moral policy. Evaluation should test whether pluralism improves understanding without endorsing harm, stereotyping groups, or covertly inferring a user's values.

MECHANISTIC AND PLURALISTIC CONTROL

47

The Pluralistic Moral Gap: Understanding Judgment and Value ...

B

arXiv · Preprint / conceptual-empirical study

Examines gaps between model judgment and diverse human values, making pluralism an empirical rather than rhetorical target. It is useful for defining whose disagreement a benchmark captures. Its conclusions depend heavily on population sampling and aggregation choices, which should remain visible rather than collapsed into a universal baseline.

MECHANISTIC AND PLURALISTIC CONTROL

48

Robustness of Eliciting LLM Moral Profiles

B

OpenReview · Conference submission / review copy

Tests whether elicited moral profiles survive changes in prompt, sampling, or procedure. This is a foundational source for deciding whether profile scores are measurements or artifacts. Use its robustness checks as minimum benchmark requirements, while checking the review status and final version before formal citation.

LLM MORAL PROFILING

Mechanistic and pluralistic control / Pluralistic and agentic alignment

49

VALUEFLOW: Toward Pluralistic and Steerable Value-based ...

B

AlphaXiv mirror · Preprint discovery / mirror

Proposes a framework for pluralistic, steerable value behavior. It is relevant to dynamic value control and may supply evaluation tasks or mechanisms beyond static alignment. AlphaXiv is a mirror; readers should locate the canonical paper version and verify methods, benchmarks, and release artifacts.

MECHANISTIC AND PLURALISTIC CONTROL

50

Structured Moral Reasoning in Language Models

A

EMNLP 2025 / ACL Anthology · Peer-reviewed conference paper

Studies explicit structure in model moral reasoning, potentially improving auditability over unconstrained rationales. It is a strong bridge from behavioral scoring to reasoning-process evaluation. Benchmarkers should test whether structure improves correctness and consistency, not merely the appearance of deliberation.

MECHANISTIC AND PLURALISTIC CONTROL

51

How Human Values Reshape LLM-Agent Communities

B

EMNLP 2026 paper site · Conference paper / author-hosted PDF

Examines how value settings affect communities of interacting language-model agents. It extends alignment from individual outputs to emergent group dynamics, coordination, and polarization. Because the report links an author-hosted file, readers should verify the final proceedings version and evaluate sensitivity to agent roles, network structure, and simulation assumptions.

PLURALISTIC AND AGENTIC ALIGNMENT

A benchmark is credible only if its moral profile survives method changes

Recommended reading sequence

#4 Start with the official MFT map and follow it to primary theory.

#12 Choose the exact questionnaire form; do not improvise item sets.

#14 Check factor structure and cross-group comparability.

#25 Treat method disagreement as a validity warning, especially multilingual.

#9 Use an annotated corpus with transparent categories and annotator metadata.

#21 Add event structure and context beyond surface words.

#28 Measure multiple reasoning dimensions, not a single ethics score.

#32 Model uncertainty rather than reporting brittle point estimates.

#41 Compare model profiles with human data without equating similarity and rightness.

#42 Stress-test story language and reasoning language separately.

#48 Require prompt and sampling robustness before calling a profile stable.

#50 Evaluate structured reasoning while checking for merely persuasive rationales.

Minimum evidence checklist

- State whether the benchmark uses MFQ-1, MFQ-2, vignettes, dictionaries, classifiers, or a combination.
- Include at least one alternative taxonomy or convergent method.
- Publish prompts, ordering, decoding settings, repetitions, and model identifiers.
- Report per-foundation uncertainty and annotator agreement.
- Test paraphrase, stakeholder framing, and adversarial prompt sensitivity.
- Run multilingual invariance checks rather than translated-item equivalence alone.
- Distinguish description of human values from endorsement of those values.
- Revalidate after model updates; moral profiles are versioned measurements.

> **Bottom line.** MFT is most defensible as one coordinate system in a larger evaluation battery. It becomes misleading when a single elicitation is treated as a model's fixed moral identity.

Citation note. This bibliography preserves the source report's numbering and linked destinations. Several titles were truncated in that report; those entries are marked through cautious descriptions rather than reconstructed metadata.
